HOW I WORK WITH AI

One person.
A team of AI agents.

This is how my daily work actually runs.

The big picture.

Me — I decide what to build

MESSAGE

My main assistant — gets the task

MESSAGE

Specialist agents — do the work

MESSAGE

Back to me — I review and approve

> Every arrow is a message. Most of it happens from my phone.

It starts with one message.

I text my main assistant on Grok Bot.

It has its own computer, with Claude and ChatGPT connected.

It writes code, runs it, and sends me the result.

It works through my to-do list.

I built a task app with Claude.

The assistant picks the next task and does it.

When it’s done, it tells me.

04 — JIMMY (DON'T ASK WHY)

Jimmy builds the software.

He splits a project into small parts.

Claude Code writes each part; Jimmy tests it.

I see a prototype first and approve it from my phone.

Two agents scout the news.

One watches X, one watches LinkedIn.

They share a group chat and trade ideas.

Anything technical goes straight to Jimmy.

AI does the work. I decide what's worth doing.

The limit isn't the tools anymore.

It's knowing what to build, and what good looks like.
