NIMA MOHAMMAD ZADEH

— PRODUCT · AI

# I let my users shape my products.

No request queue. The product builds changes with them.

NIMA MOHAMMAD ZADEH

— 01 — THE PROBLEM

# I won’t run feature requests.

Open source felt wrong too.
Users improve a product best.

NIMA MOHAMMAD ZADEH

— 02 — THE ASSISTANT

# The product is the agent.

01
**Memory**

02
**Whole project**

03
**Security guardrails**

04
**User-data guardrails**

— 03 — HOW IT WORKS

# It works like a product manager.

Talk it through — FEEDBACK

Build the change — WITH USER

— 04 — SHIP IT

# Then a vote decides.

ASK One user shares an idea.

VOTE Then it ships for everyone.

— 05 — THE COST

# The API bill is high.

# Worth it.

To me, the idea matters more than the bill.

— 06 — PATRICK COLLISON

# A name for it: liquid software.

Oct 31: a text box wired to an agent that builds requests.

— 07 — HIS EXAMPLE

# One user made 150 improvements in a few days.

## In one of Collison's own apps.

NIMA MOHAMMAD ZADEH

— 08 — MY ANSWER

# Shared software needs a shared vote.

Collison asks how this works for collaborative software.
